Self-Check 1.1-2: Data and Statistics Statements

Self-check · Module version 2 · Completed · Handed in 1 time

Self-check, attempt 1: 10 of 10 correct

1. A population is the subset of individuals you actually collect data from in a study.
   Answer: False — Correct

2. Observational studies can establish association or correlation but generally not causation.
   Answer: True — Correct

3. Discrete numerical variables are countable and you can list all their possibilities.
   Answer: True — Correct

4. In the smoking story from the 1930s, anecdotal evidence about healthy smokers proved to be more reliable than large-sample data over time.
   Answer: False — Correct

5. Random sampling happens when subjects are selected for a study and helps make results generalizable to the population.
   Answer: True — Correct

6. A census surveys everyone in the population and is always the best approach for data collection.
   Answer: False — Correct

7. Categorical variables with levels that have a natural order are called ordinal variables.
   Answer: True — Correct

8. In a double-blind experiment, only the subjects do not know which group they are in.
   Answer: False — Correct

9. Convenience bias occurs when only easy-to-reach people are included in the sample.
   Answer: True — Correct

10. The breakfast cereal study mentioned was an experiment that proved eating cereal causes lower BMI.
    Answer: False — Correct

This sheet is a record of the work done on one activity. It is not a competency decision: competence in a unit is decided on assessed evidence.
