Self-Check 1.1-4: Key Statistical Concepts

Self-check · Module version 2 · Completed · Handed in 1 time

Self-check, attempt 1: 10 of 10 correct

1. The ___ is the whole group of interest that you ultimately want your conclusion to apply to.
   Answer: population — Correct
2. A ___ variable takes numeric values you can sensibly add, subtract, and average.
   Answer: numerical — Correct
3. ___ evidence is a story from one or a few cases that may be true but has a tiny sample.
   Answer: Anecdotal — Correct
4. The principle of ___ means using a large enough sample or repeating the whole study for reliable results.
   Answer: replication — Correct
5. A ___ is a fake treatment like a sugar pill used as the control in medical studies.
   Answer: placebo — Correct
6. When two variables show a connection and one tends to change as the other changes, they are ___.
   Answer: associated — Correct
7. The ___ is the whole grid of rows and columns organizing observations and variables.
   Answer: data matrix — Correct
8. ___ bias occurs when a random sample is drawn but only a non-random slice replies.
   Answer: Non-response — Correct
9. In experiments, ___ means subjects don't know whether they're in the treatment or control group.
   Answer: blinding — Correct
10. Categorical variables that have no inherent ordering to their levels are called ___.
    Answer: nominal — Correct

This sheet is a record of the work done on one activity. It is not a competency decision: competence in a unit is decided on assessed evidence.
