Self-Check 8.1-2: Waste Minimization Principles and Practices

Self-check · Module version 2 · Completed · Handed in 1 time

Self-check, attempt 1: 10 of 10 correct

1. Waste minimization is the reduction in the quantity of hazardous wastes achieved through a conscientious application of innovative or alternative procedures.
   Answer: True — Correct

2. Waste minimization often results in increased costs due to the need for specialized disposal services.
   Answer: False — Correct

3. Simple adjustments such as minor process changes in lab experiments may be sufficient to achieve waste minimization results.
   Answer: True — Correct

4. The most effective waste minimization method is recycling at the end of the product lifecycle.
   Answer: False — Correct

5. Renovating a house is far better than demolishing it because most demolition waste ends up in landfills.
   Answer: True — Correct

6. The three R's of waste minimization are Reduce, Recycle, and Remove.
   Answer: False — Correct

7. Waste minimization can result in improved product quality through new technological practices.
   Answer: True — Correct

8. Companies committed to waste reduction experience a worse public image due to increased operational costs.
   Answer: False — Correct

9. Keeping wastes segregated by compatibility helps avoid cross-contamination.
   Answer: True — Correct

10. Zero waste is a systems approach designed to manage waste more efficiently after it is created.
    Answer: False — Correct

This sheet is a record of the work done on one activity. It is not a competency decision: competence in a unit is decided on assessed evidence.
